DETAILED ACTION

Information Disclosure Statement

The information disclosure statement filed 6/7/04 fails to comply with 37 CFR 1.98(a)(2), which requires a legible copy of each cited foreign patent document; each non-patent literature publication or that portion which caused it to be listed; and all other information or that portion which caused it to be listed. It has been placed in the application file, but the information referred to therein has not been considered.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 2, 10-12, and 20 are rejected under 35 U.S.C. 102(b) as being anticipated by US Patent Application Publication 2002/0111559 to Kurata et al. Kurata teaches a method and apparatus for estimating visceral fat area of a subject wherein values indicating height and fat mass are acquired using a data acquiring component 2 (fig. 1; paragraphs 26 and 30 of Kurata). A data processing component 16 (fig. 2 of Kurata) estimates a value indicating visceral fat area of the subject based on the acquired data, wherein the data processing component estimates the value indicating visceral fat area by using the product of an Xth power of the height value and a Yth power of the fat mass value, where each of X and Y is a number other than zero (paragraphs 24 and 32; equations 1-3 of Kurata).

Regarding claims 2 and 12, the estimation of the value indicating visceral fat area is performed by using body fat mass/height², which is equivalent to FM/Ht² (equation 1 of Kurata).

Regarding claims 10 and 20, the value indicating fat mass of the subject is acquired by using a bioelectrical impedance analysis (paragraph 30 of Kurata).

Allowable Subject Matter

Claims 3-9 and 13-19 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter:

Regarding claims 3, 5, 7, 9, 13, 15, 17, and 19, the prior art of record fails to teach or fairly suggest a method or system for estimating visceral fat area, wherein the estimation of the value indicating visceral fat area is performed by using a parameter expressed as Ht²/FM, where Ht is the value indicating height and FM is the value indicating fat mass, in combination with all of the other limitations of the claims.

Regarding claims 4, 6, 8, 14, 16, and 18, the prior art of record fails to teach or fairly suggest a method or system for estimating visceral fat area of a subject, wherein the estimation of the value indicating visceral fat area is performed by using any one of the following equations:

$$VFA = C11 * FM/Ht^2 + C12 * Age + C13$$

$$VFA = C31 * FM/Ht^2 + C32 * Age + C33 * Wt/Ht^2 + C34$$

$$VFA = C51 * FM/Ht^2 + C52 * Age + C53 * \%Fat + C54$$

where C11, C12, C13, C31, C32, C33, C34, C51, C52, C53, and C54 are constants, FM is the value indicating the subject's fat mass, Ht is the value indicating the subject's height, Age is the value indicating the subject's age, Wt is the value indicating the subject's weight, and %Fat is the value indicating the subject's body fat percentage, in combination with all of the other limitations of the claims.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
